AMP

Plateforme de batterie AMPShare commune à plusieurs marques

3 Editor: G.Herpin

FRANCE

Tool type

Screw

The screw is the most common assembly part in wood (80% of assemblies) • No wood screwing can be done with a bolter • The Mafell
A18 is the specific wood screwdriver capable of adapting to all the screwing and drilling needs of a wood site (safety, angle drive, screwing power, etc.)

Ref: EL132185

BOUYGUES

FRANCE

Tool type

Drilling and Bolting into Concrete

• Bolting represents 95% of metal/wood and wood/concrete assemblies • Anchors are most often concrete screws or dowels

- In CLT flooring as in CLT walls, panel seams with
 - Tongue and grooves can be done with a roller feed screwdriver.
- There is also an extension for working at height

Tool type

Sewing screw

 This type of screwdriver requires a good grip to understand all the settings and make good use of them: • Mounting the extension • Position of the roller (5*80 screws) • Screwing depth
 • Changing the tips

Nail

There are two types of nailing to differentiate: anchor nailing and seam nailing. There is no nailer that can do both tasks (pressure and nail format).

BOUYGUES

- The pneumatic nailer allows you to have rolls of up to 100 nails (less reloading)
- The pneumatic nailer has good repeatability regardless of the temperature
- Requires a compressor and a connection hose

Gas nailing means you don't need a compressor and allows for greater freedom of movement (no air hose). However, you must plan for:

gas cartridges as consumables • nail reams are
25-50 nails • use in very cold weather requires keeping

the gas cartridge warm

EL114425

BOUYGUES

• Concrete drilling and wood touch-ups require the use of vacuum cleaners. • Wood touchups are on a fixed workstation; large vacuum cleaners are preferred.

 Concrete drillings are often linear and can be at height, a mobile suction can be judicious

- Two frame saws are referenced today (Festool and Mafell) These saws are made to make repeat cuts on thick wooden elements such as CLT or Glued laminated timber
- Very clearly to be preferred in terms of precision and safety and compared to the chainsaw which will still remain essential in certain cases

These machines are designed like a circular, they have a table with angle tilt, a protective cover at the end of the guide, as well as a dividing knife.

They can be mounted on a guide rail or used with a parallel guide

Please note that these machines do not allow you to dive into wood.

Specific tools

Resumption of notches

- The chainsaw remains essential in certain cases, it allows you to dive and make mainly occasional machining operations in the core (insertion of fittings) or making a light to be able to lower a frame saw into the wood.
- The wooden elements are often structural and the repairs must be done with care and precision at the risk of jeopardizing the work. It is necessary to favor the electric chainsaw which is certainly less powerful but much more precise.
- Significant advantage of an electric chainsaw: less vibrating, less noisy and much faster chain stop.

DISTRIMO rental required, Wearing class 1 anti-cut PPE required

Groove

The NFU 50 MAFELL groover (distrimo ref: EL132191) can be used to resume forgotten machining such as grooves or rebates in wood.

Groove

This one is designed like a circular, it has a table with angle tilt, a protective cover, as well as a depth adjustment which makes it much more suitable, precise and safe than a plane to go down into the wood.

It can be mounted on a square rail or on a guide rail.

Plane

- The plane is a tool for reworking a section of wood or refining machining, for example enlarging a chamfer
- It is not to be used to retake or make a groove.
- Please note that unlike the Mafell groover, the planes are not equipped with a shaft housing. can continue to turn for a few seconds while braking.

Thank you for your attention!

The objective of the wood training is to have mastered all the tools presented previously.
